

LIGHTING - WALL

Parenthetical Light

Designed and Manufactured in Seattle, WA by Force/Collide

DESCRIPTION

Parenthetical Light uses fabricated silicon bronze and light to create tension through form. Largely referencing surroundings that overwhelm with emblems, graphic cues and architectural signals, the piece contorts space outward and back again in sustained call and response. Dramatic shadows and abstract shapes act in counterpoint; a deep spectrum of tones is brought out with a hand finished patina.

SPECIFICATIONS

Materials

Silicon bronze

Dimensions
