

LIGHTING - FLOOR

Leaning Axis Light

Designed and Manufactured in Brooklyn, NY by Thislexik

DESCRIPTION

The Leaning Axis Light is a modular lighting fixture that plugs directly into a wall. The brushed brass connector holds each LED bulb in place while the handmade end caps keep the piece visually balanced. All of the LED bulbs are dimmable, and the lamp is wired in a way that encourages the user to rotate the LEDs encased within the acrylic by merely twisting either end of each end cap to adjust the direction of light. The centerpiece of brass can also be moved up or down the length of the vertical LED to suit the height of virtually any wall plug.
