

LIGHTING - CEILING

Globe

Designed and Manufactured in Brooklyn, NY by Richard Clarkson Studio

DESCRIPTION

Globe is a suspended handblown glass ball in 12" and 8" diameters. The design of the Globe creates a unique viewing perspective of plants and other elements, often providing intense magnification or complete disappearance.

The nearly invisible power cord used for each globe is made possible by utilizing micro-wire technology developed for wearable electronics. Combined with discrete but incredibly strong stainless steel cable, the Globe floats in the air, drawing the full focus to the elements inside the Globe. In this way, Globe is very much an evolving vessel of both matter and light.

SPECIFICATIONS

Dimensions

8" diameter

12" diameter

Materials

Handblown Glass, Brass, Steel, electrical components

Features

Replaceable LED bulb

Installation anchor not included

Watering access and air vent

UL Power supply

Planting guide included

PIY (Plant It Yourself)

LEAD TIME

2-3 weeks
